Subject: Prohibition on the Use of Adhesive Anchors in Tension

Please be advised that the use of adhesive anchors in overhead applications under sustained tensile loads are prohibited on any Massport construction project and any project conducted by a tenant at a Massport facility. Adhesive anchors will be permitted in shear load applications or in other applications where the adhesive anchors are not under sustained tensile load.

Please notify the Massport Project Manager or Jennifer Revill, Manager of Tenant Alterations if any current design includes the use of anchors in tension.

Thank you for your attention to this important matter.
